Snap-action switches, S800, S804, S814, S820 Series

Featuring double-break contacts and positive opening operation

S800 and S804 series – application proven snap switches

S800 and S804 series switches feature a VDE approved positive opening operation which guarantees - within the requirements of the standard - the forced opening of contacts that have become welded together after a short-circuit. This makes them ideally suited for use in all safety related applications.

S814 series

The S814 has a plunger running through the switch. This makes it possible to mount two switches on top of each other, and trigger two operations with only one actuation. Wiping contacts ensure high contact reliability over the life of the switch.

S820 – snap switches featuring higher ampacity

S820 series switches add to the well proven standard products, offering a current-carrying capacity which is twice as high ($I_{th} = 20\text{ A}$) as for example S800, as well as a more ruggedized design making them best suited for use under unfavourable ambient conditions which call for higher shock and vibration resistance. A typical field of application is medium-voltage switchgear and controlgear.

The S820 is a Form Zb SPDT-DB switch with double-break contacts. Its two mechanically linked rigid contact bridges are galvanically isolated, thus ensuring the failsafe closing of two separate load circuits with independent voltage levels.

Features

Series S800/S804/S814/S820

Positive opening operation: Reliable breaking of the normally closed (NC) circuit even if the contacts have become welded together, in compliance with IEC 60947-5-1, Annex K (except for S814).

IP rating: Protection against dust, hazardous substances and direct contact with live parts in compliance with IEC 60529: Contacts IP40 / Terminals IP00

Double-break contacts: High electrical rating due to rigid contact bridge

Contact material:
S800 and S814: Silver or Gold
S804 and S820: Silver

Precision switch: High switching accuracy and resistance to shock and vibration

Blowouts: Optional magnetic blowout to ensure efficient quenching of electric arcs and high DC switching capacity

Switch design and function

Series S800/S820

▶ Actuators

- Standard: Pushbutton
- Aux. actuator: roller lever

▶ Mounting styles

- Front mount
- Side mount (ganging)

▶ Contacts

- Double-break contacts and rigid contact bridge
- Positive opening operation
- Contact material: silver or gold

▶ Terminals

- M3 screws with saddle clamp
- Flat tabs 6.3x0.8
- M3 screws with spring washer

Competence

The success of a product is owed to its quality

The Schaltbau product line is clearly defined and keeps up with the technological requirements of today's markets. Behind every individual snap-action switch you will find decades of experience in engineering and manufacturing. Snap-action switches are designed with a snap-mechanism that allows fast switching, largely independent of the actuation speed. This precisely reproduces the operating position, and controls the arc more efficiently. With their well known transparent-green housing, the safety function in Schaltbau's snap-action switches is visible.

Applications

Series S800/S804/S814/S820

Schaltbau snap-action switches are typically used with systems and components that require a high degree of safety and reliability, such as:

- Limit switches for machine, door and plant control systems
- Aux. switches in cam gear and control and indicating devices
- Switching elements for automation
- Safety limit switches for control systems and plant controls

Total positive opening travel	13.60
Total travel position	13,3
Movement differential (between operating and release position)	2.2 (typical)

Note: To ensure proper operation of the positive opening function it is necessary to depress the plunger to the point of total positive opening travel. However, it must not be pushed beyond total travel position. Data is valid for new switches.

Mechanical fastening Front mount, ganging

Series S800

Front mount

- **No mounting brackets:** By way of the nut retainers (M3) that are inserted into the switch housing. Torque 0.9 Nm max.
- **With mounting brackets:** By way of M3 screws for all actuator styles. Torque 0.9 Nm max.

Actuators without mounting brackets

- **Pushbutton (standard) style [b]**

- **Roller lever style [e]**

Ganging

- Through the transversal bore holes with 4 mm screws or bolts. Torque 1.0 Nm max.
- Alternatively DUO clips or retaining rings can be used.

Actuators with mounting brackets

- **Pushbutton style [c]**

- **Roller lever style [a]**

- **Roller lever style [as]**

- **Roller lever style [d]**

Terminal styles M3 screws, flat tabs 6.3x0.8

Series S800

- **M3 screws with saddle clamp (standard) style [19]**

- **Flat tabs 6.3x0.8 style [20]**

- Note:**
- Single and multiple-wire conductors with wire gauges AWG 18... 12 (0.75 mm² ... 2.5 mm²) can be clamped without wire end ferrules. If a ferrule is used the maximum wire gauge is AWG 14 (1.5 mm² max.)
 - Max. 2 conductors with the same wire gauge can be clamped per terminal.
 - Tightening torque of terminal screws should be 0.9 Nm max.
 - IP rating: contacts IP00 / terminals IP40

Instruction on when to use a roller lever (examples)

Series S800

Snap-action switches are designed for actuation with and without roller lever. A roller lever is required, if the direction of actuation deviates more than $\pm 15^\circ$ from the perpendicular line.

• Switch with roller lever actuated by cam disk

Cam disk Ø	Clearance Y
40 mm	3.6 mm
60 mm	0 mm
100 mm (max.)	0 mm

• Switch with roller lever actuated by trigger cam

Protective housing SK-100, SK-200, SK-400, SK-400-B

Series S800

SK-100

Protective housing (half shells) made of fibre glass reinforced PC. Screw-type terminals of switches used with protective housing SK-100 are sealed to IP40.

SK-200

Protective cover made of flexible soft PVC. Protective cover SK-200 prevents accidental contact with the 4 live M3 screw terminals.

SK-400

Protective cap made of fibre glass reinforced PC. Protective cap SK-400 prevents accidental contact with the 4 live M3 screw terminals.

Protective caps Protective cap SK100, SK200 and SK400, from left to right

- Max. 2 conductors with the same wire gauge can be clamped per terminal
- IP rating: contacts IP00 / terminals IP40

Plunger travelling full length through the switch

Series S814

A special feature of the S814 is its plunger which, on actuation travels the full-length of the switch. This makes them ideally suited for applications where the switching element must be in line with the perpendicular line of actuation. It is thereby possible to mount two S814 switches on top of each other and trigger two switching operations with only one actuation, like a full-blown dual changeover switch.

For this reason they are especially suited for use as emitter switches for meters and counters, for use with indicating devices, master controllers and control units and, last but not least, as switching elements for membrane switches.

Actuator style and positions

Series S814

• **S814 Pushbutton (standard) **b****

Actuator positions	Pushbutton (standard) b Dimension X in mm
Free position	12.6 ± 0.2
Operating position	11.6 ± 0.2
Release position	12.1 ± 0.2
Total travel position	10.6
Movement differential (between operating and release position)	0.5 (typical)

Note:
Actuator must not be pushed beyond total travel position.
Data is valid for new switches..

Example: **S820 b7/40 L**

Series, Contact configuration

S820 Form Zb SPDT-DB with positive opening operation and galvanically isolated contact bridges

Actuator styles

	Actuator style	Mounting style
b	Pushbutton	No mounting brackets
e	Roller lever	No mounting brackets
a	Roller lever	With mounting brackets

Contact material

7 Silver (Fixed contact AgCu3 / contact bridge AgSnO2)

Note:

- Single and multiple-wire conductors with wire gauges AWG 18... 12 (0.75 mm²... 2.5 mm²) can be clamped without wire end ferrules. If a ferrule is used the maximum wire gauge is AWG 14 (1.5 mm² max.)
- Max. 2 conductors with the same wire gauge can be clamped per terminal.
- Tightening torque of terminal screws should be 0.9 Nm max.
- IP rating: contacts IP00 / terminals IP40

Instruction on when to use a roller lever (examples)

Series S820

Snap-action switches are designed for actuation with and without roller lever. A roller lever is required, if the direction of actuation deviates more than $\pm 15^\circ$ from the perpendicular line.

- **Switch with roller lever actuated by cam disk**

- **Switch with roller lever actuated by trigger cam**

Mounting and safety instructions, environmental conditions

Series S800/S804/S814/S820

Mounting instructions:

- Snap-action switches should be mounted by qualified professional staff only.
- Observe the required clearance and creepage distances. This is also true for connected wires.
- It is necessary to use insulating plates when ganging or mounting switches on uninsulated surfaces.
- The switches can be mounted in any desired position.
- When mounting the switches mechanically make sure to have 2 fastening elements (e.g. screws).
- Only use adequate fastening elements such as cylinder head or collar screws or DUO-clips, including washers. When fastening make sure not to exceed the maximum tightening torque.
- When mounting switches with mounting brackets make sure that the mounting surface is level.
- Avoid tilting the screw when mounting and prevent mechanical tension on the housing.
- The actuator may not be pre-tensioned when in the free position. When actuated, the actuator should travel well beyond the operating position, for at least 50% of the predefined overtravel, all the way to total travel position.
- To ensure the proper function of the positive opening operation it is necessary to depress the plunger to the end point of the positive opening travel.
- To prevent mechanical destruction of the switch, make sure that actuation of the switch does not exceed the specified total travel position. Avoid using the switch as a mechanical end stop.
- High-impact actuation of the switch can also have a negative effect on its mechanical life.
- When securing stripped wire ends in the terminal clamp, make sure the wire insulation is flush with the clamp.
- Make sure that strain relief of the connected leads functions.
- Prevent a transfer of forces to the switch terminals.
- When using versions with blowout magnets observe the right polarity, see circuit diagram at the bottom of the switch.

Non-permissible environmental conditions:

- Cleaning agents, adhesives, solvents, or screw-retaining varnish must be compatible with polycarbonate (S800, S804, S814 series) and polyethersulfone (S820 series), respectively. Never use chemicals not compatible with polycarbonate for S800, S804 and S814 series switches and polyethersulfone for S820 series switches, respectively.
- Using chemicals which are not compatible can result in cracks, deformation, breakage and dissolution of the housing or complete destruction of the switch.

Safety instructions:

- Be sure to make visual inspections regularly.
- Improper handling of the switch, e. g. when hitting the floor with some impact, can result in breakage, visible cracks and deformation.

Defective parts must be replaced immediately!

For a detailed list of all safety instructions see here:
schaltbau.info/download2en/
Standards

Series S800/S804/S814/S820

- **IEC 60947-5-1:** Low-voltage switchgear and controlgear, Part 5-1: Control circuit devices and switching elements - Electromechanical control circuit devices
- **IEC 60947-5-1, Annex K:** Special requirements for control switches with direct opening action
- **UL508:** Industrial control equipment
- **IEC 60529:** Degrees of protection provided by enclosures (IP Code)
- **UL 94V-0:** Flammability Standard
- **DIN 41636-6:** Dimensions correspond to type F as defined by the standard
- **DIN 40050-9:** Road vehicles; degrees of protection (IP code); protection against foreign objects; water and contact; electrical equipment
- **DIN 46244:** Tabs for receptacles

Electrical Components and Systems for Railway Engineering and Industrial Applications

Connectors

- Connectors manufactured to industry standards
- Connectors to suit the special requirements of communications engineering (MIL connectors)
- Charging connectors for battery-powered machines and systems
- Connectors for railway engineering, including UIC connectors
- Special connectors to suit customer requirements

Snap-action switches

- Snap-action switches with positive opening operation
- Snap-action switches with self-cleaning contacts
- Enabling switches
- Special switches to suit customer requirements

Contactors

- Single and multi-pole DC contactors
- High-voltage AC/DC contactors
- Contactors for battery powered vehicles and power supplies
- Contactors for railway applications
- Terminal bolts and fuse holders
- DC emergency disconnect switches
- Special contactors to suit customer requirements

Electrics for rolling stock

- Equipment for driver's cab
- Equipment for passenger use
- High-voltage switchgear
- High-voltage heaters
- High-voltage roof equipment
- Equipment for electric brakes
- Design and engineering of train electrics to customer requirements
